

How to Disable Driver Signature Enforcement in Windows 10

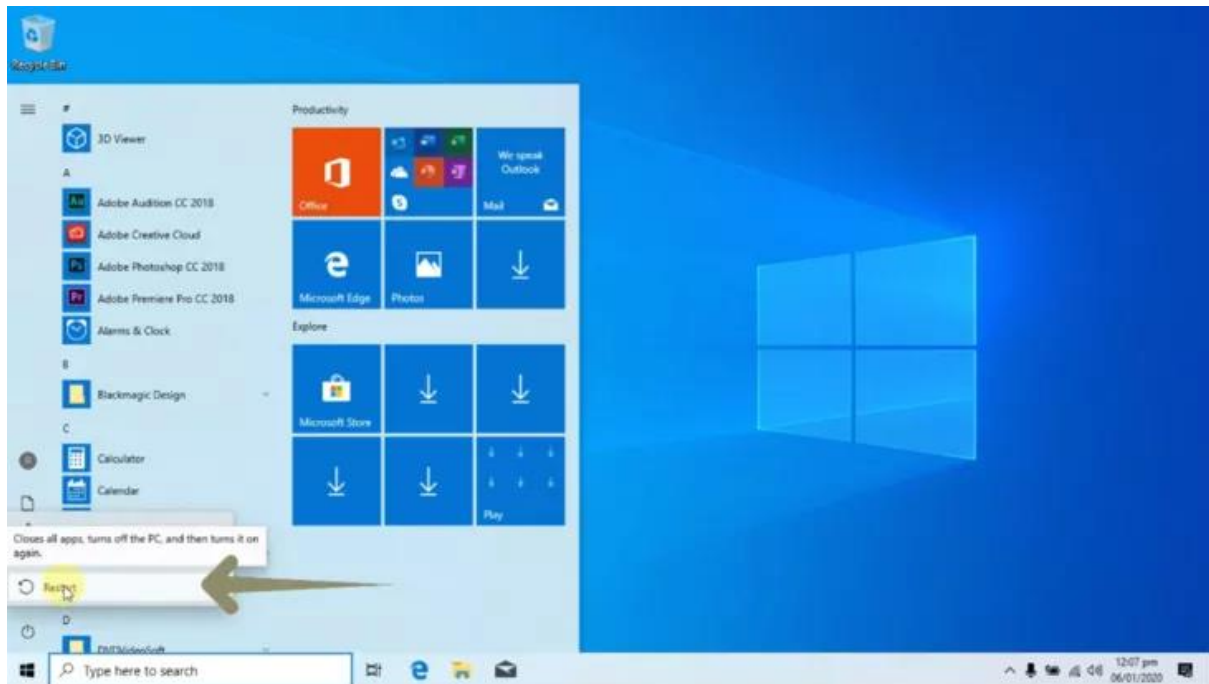

1 Click on the  **Button**. From the windows 10 desktop screen click on the start button

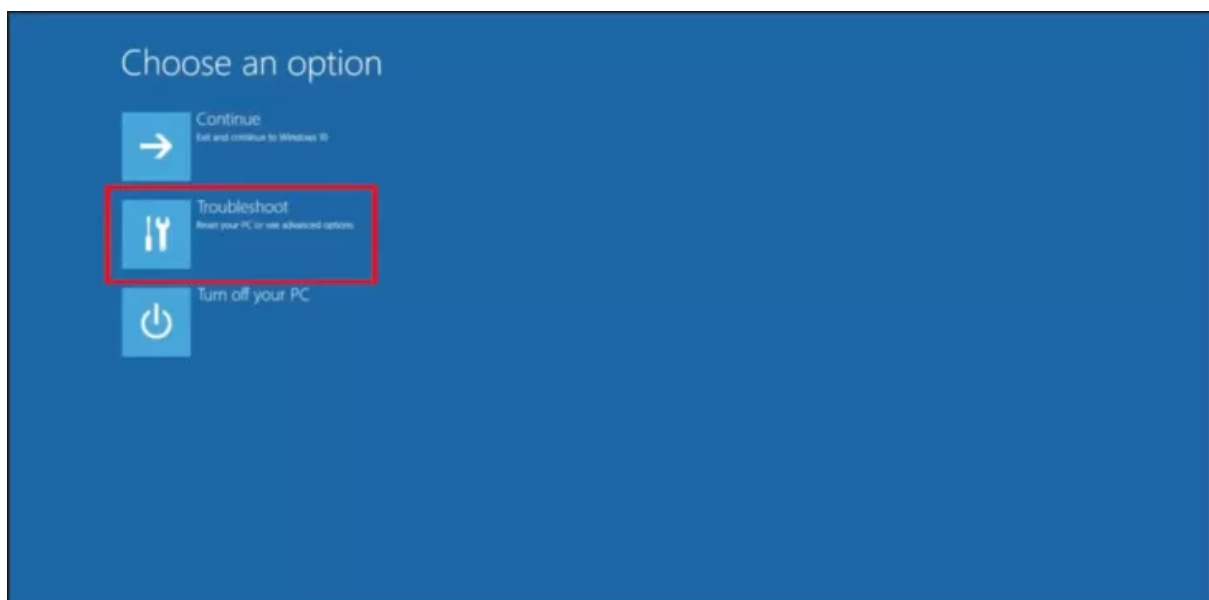

2 Click on the  **Icon**. From the start menu click on the power icon.

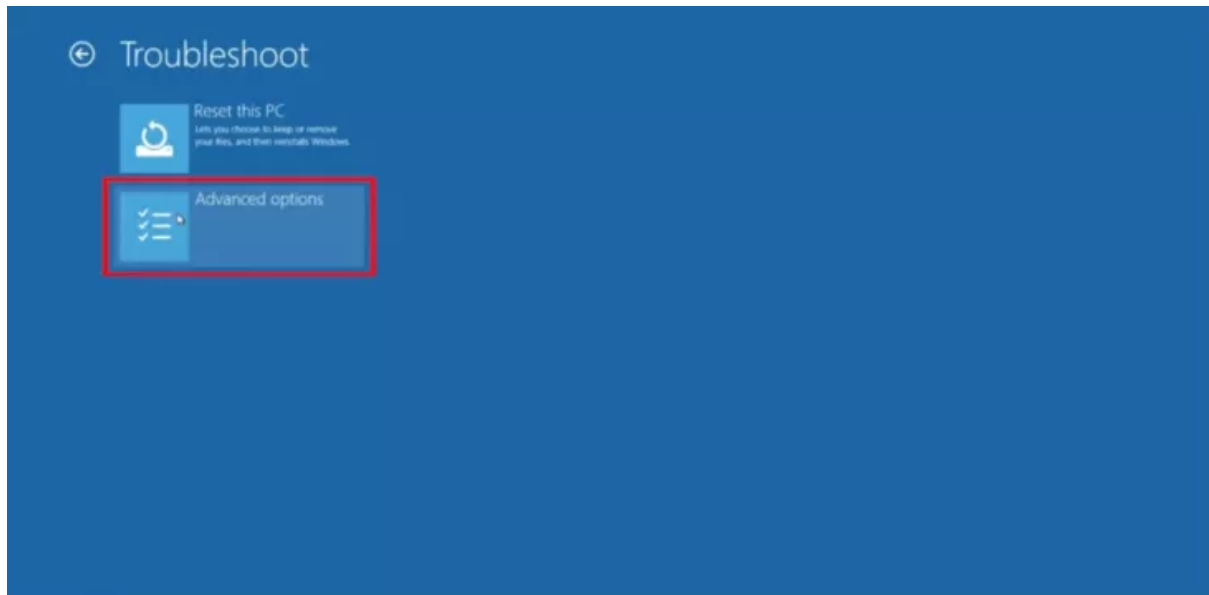

3 Restart Windows 10 in Advanced Mode. Press and hold down the  Shift on your keyboard and Click on the Restart Button.

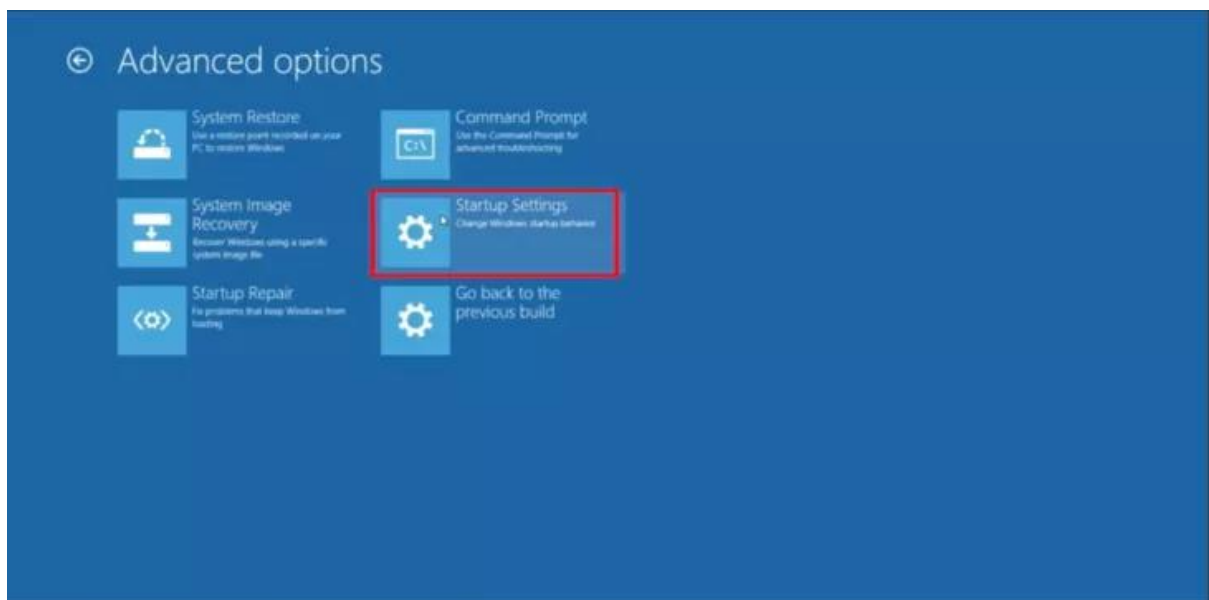

4 Click on Troubleshoot. After restarting the pc, Windows will ask you to choose an option.

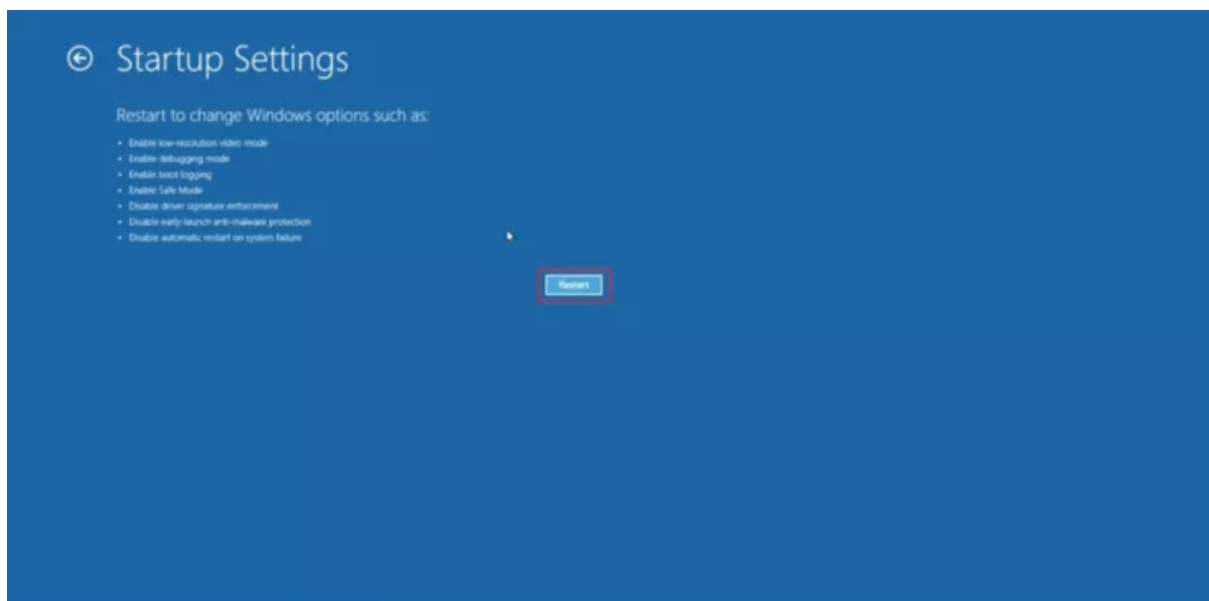

5 Click Advanced Options. From the Troubleshoot screen click on advanced options.

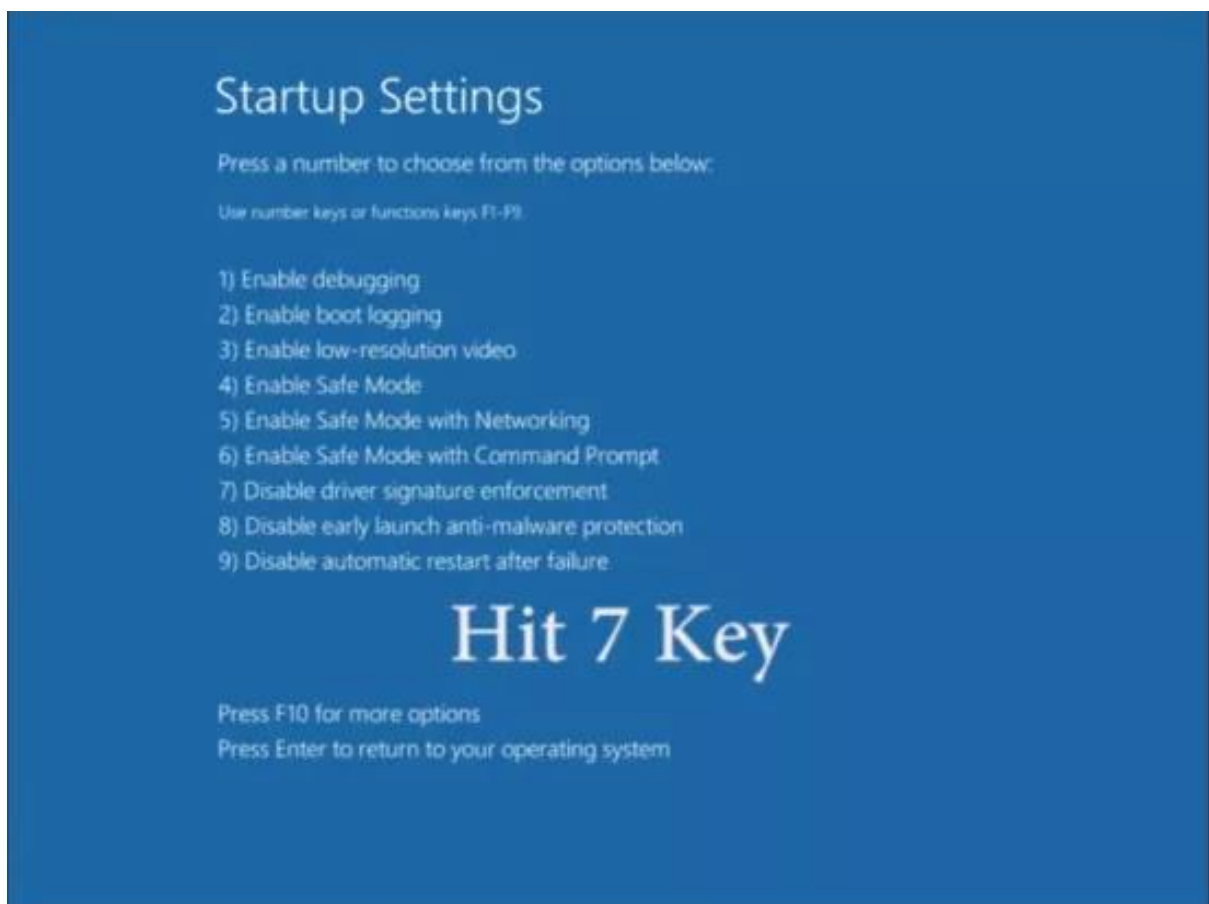

6 Click Startup Settings. In the Advance Option screen, click on Startup Settings.

7 Click on Restart Button. In order to change windows settings, click on restart button from the Startup Settings.

8 Press 7 key on your keyboard. From the startup settings press 7 key to Disable Driver Signature Enforcement on your windows 10.

9 Install Unsigned Mobile Drivers without any issue. Your PC will boot with driver signature enforcement disabled and you'll be able to install unsigned drivers. However, the next time you restart your computer, driver signature enforcement will be disabled—unless you go through this menu again. You can install GearShift drivers that.
